Developair Technologies

Main functions, requisites & benefits

Main functions

We are currently looking for someone with skills in algorithm research and development in different fields, interested in working with cutting-edge technology and in a collaborative environment. Main job responsibilities: Find innovative solutions to solve technology challenges that improve the product. Collaborate with external technology partners: universities and research centers. Participate in product management activities to define the product roadmap of the company.

Requisites

Meeting some of these requirements will be an advantage: A PhD OR Master's degree in engineering, mathematics, or related technical fields. Knowledge or expertise in techniques that fall under the umbrella of Artificial Intelligence: Machine Learning and other statistical learning techniques. Search and optimization algorithms. Mathematical logic and automated reasoning. Expertise in formal verification and experience in tools commonly used in the field such as model checkers, theorem provers and SAT and SMT solvers. Experience with Python and/or Java. English competency. It is essential to bring: A drive for continuous learning and the ability to learn quickly. Proactiveness. Teamwork skills.
