

Company Description

The Basque Centre for Climate Change (BC3) is a research centre on the causes and consequences of climate change. Led by one of the most recognized scientists in the Climate Change field -Prof. Maria José Sanz, we produce multidisciplinary knowledge to support decision making towards sustainable development at the international level. With a multidisciplinary team, connected to the main scientific institutions, networks and socio-economic agents, for a decade, our contribution to research of climate change and to the science-policy interface puts us in a unique position to offer knowledge, tools, new methodologies and cross-cutting proposals, that we lead towards action in a collaborative framework with stakeholders, to design and help implement policies aimed at sustainable development.

Company

BC3 Basque Centre for Climate Change

Main functions, requisites & benefits

Main functions

The Basque Centre for Climate Change (BC3) is looking for candidates who can support its activities related to the assessment of policies in the transition to a low-carbon, sustainable and inclusive society. The selected candidates will contribute to the analysis of the energy transition and climate and energy policies that will be carried out by the Low Carbon team and BC3 in different projects, mainly in Spain but also in the European Union. The candidate is expected to: Provide rigorous assessment of policies based on quantitative and qualitative information, including ex-ante and ex-post. Have an excellent knowledge of the main climate and energy policies in the agenda at different geographical scales and sectors or topics. Engage with multiple stakeholders and work in collaboration with them. Write reports and disseminate results in different meetings and forums. Raise fundings (depending of the experience of the candidate).

Requisites

Experience/skills required: We are looking for candidates with a university degree and solid knowledge on the assessment of energy and climate policies. Having experience in using and developing quantitative techniques to perform policy assessments is highly valued as well as the ability to create networks with decision-makers based on cooperation and co-production of knowledge. Having a Master degree or a PhD is valued, but it is not compulsory. Applicants should have excellent interpersonal as well as communication skills (both written and oral) in Spanish and English. An excellent level of Spanish is compulsory for this call.

Benefits

What we offer: A labour contract in line with the candidate's skills and experiences. A stimulating work environment in the context of the Low Carbon team within BC3. 30 days of vacations per year beyond festivities. Flexible working hours and partial telework. The position will be for a period of at least 1 year with option to renew upon mutual satisfaction based on the performance of the work. The position will carry competitive salary, matching the academic and professional profile of the applicant, and excellent work conditions. As a HR Excellence awarded institution, BC3 is committed to conciliate research-academic requirements and family duties. BC3 is particularly concerned with creating equality opportunities for women and men. Women with relevant qualifications are therefore strongly encouraged to apply for the position.
