

Company Description

"Let's make tomorrow different today" is our genuine commitment at Siemens Energy to all customers and employees on the way to a sustainable future. In our Business Unit Generation we offer a broad portfolio of cutting edge technologies, services and solutions for centralized and decentralized energy production. The Engines Business is right at the centre of a paradigm shift. More than ever variable renewable calls for more flexible, localised power generation, and decarbonisation calls for more efficient use of resources. Built on 50 years of history in engine technology, the Engines Business takes the pedigree and technology of Guascor, and marries it with the global reach and brand strength of Siemens, with the bold objective of increasing market share four-fold over five years. With products in the range of 0.5MW – 2MW, and several best-in-class applications, the Siemens Energy Engines Business is well placed in the markets of flexible power, CHP and energy from waste Siemens Engine Business Partners (BPs) are key to ensure we deliver a proper quality to our end customers and provide a nice stability to our factory that allow us to focus on growth. But they also need a comprehensive support from the business to get trained and access a proper documentation that illustrates how to service our engines and packages. Our training to BPs is based on "building block" and "team teaching" techniques using the official service documentation
