Main functions, requisites & benefits

Main functions

We are looking for a Safety Engineer to lead the risk management and product safety process. His/her functions include the following: Leading the process of identifying risks associated with the product, taking into account its different subsystems and components. Evaluation of requirements and traceability to tests (PHA, FMEA). Preparation of safety studies. Project risk management, definition of actions to mitigate risks, SRACs and residual risks. Definition of action plan and constant communication with the different areas to execute the proposed actions. Preparation of the technical safety dossier (Safety Case, Validation & Verification Report).

Requisites

Education: Higher Engineering Languages: A high level of English is required and Basque will be an asset. Experience: A person with at least 3 years' experience in similar tasks is required. Used to analyse, define risks and propose improvement actions. Experience in sectors with strong safety requirements (railway, aeronautics, automotive, medical, etc.) will be a plus. We are looking for a person with initiative, creativity and curiosity with decision-making and team management skills.

Benefits

- Joining a cutting-edge technology startup offering disruptive medical solutions.
- Professional development opportunities
- Interesting financial conditions
