

Company Description

Graphenea Semiconductor SLU (www.graphenea.com), leader in graphene production, is currently looking for a talented (Chemist / Materials Scientist/Engineer) Graphenea, which is based in San Sebastian, Basque Country (Spain), has been created with the mission of developing graphene-based process and product technology, as well as conducting related research activities.

Information

 Deadline: 2023-03-31
 Category: Business
 Province: Gipuzkoa

 Country: Basque Country
 City: San Sebastián

Company

Graphenea

Main functions, requisites & benefits

Main functions

We are seeking a highly motivated person with an interest in research and innovation. The position holder, working closely with the R&D research team, will conduct activities related to implementation and scale up of new fabrication processes in the production line and graphene integration in potential applications (optoelectronics, electronics, photonics). The position requires a Degree in Chemistry, Materials Science or Engineering.

Requisites

Valuable experience: Previous research experience in nanomaterial processing (graphene, related 2D-materials or other nanomaterials) and characterisation Materials integration into applications Previous research experience in an industrial environment, specially in the semiconductor industry, will also be valued Proficiency in spoken and written English is compulsory.
