Company

Oxcitas

Main functions, requisites & benefits

Main functions

Mission: To work in close collaboration with the technical team and in line with the company's business focus to expand the reach of our current and future developments. To contribute ideas and provide creative input to different projects in line with the company strategy. To drive front-end and back-end development by using modern frameworks and tools. To help us generate new business opportunities by transforming our technological developments into tangible solutions targeted to different types of potential customers.

Requisites

Proficiency in programming languages such as Python and JavaScript (or other relevant languages for backend and frontend development). Experience in designing, implementing, and managing full-stack systems using modern frameworks and tools. Familiarity with containerization tools like Docker and orchestration platforms. Experience with developing, deploying, and scaling APIs, computational tools, or data processing pipelines. Strong understanding of version control systems (e.g., Git). Experience with CI/CD pipelines for automating deployments is a plus. Experience with cloud platforms (e.g., AWS, Azure, GCP) for deploying and managing computational tools is a plus. Collaborative attitude and passion for developing new technologies. Willingness to learn new tools and flexibility to adapt to an evolving strategy. Ability to keep a track record of personal work and to communicate with an interdisciplinary team. Fluency in both oral and written communication in English is a must. Conversational level of Spanish would be preferred.

Benefits

The opportunity to learn about drug discovery and digital health. To be part of a team full of highly qualified professionals/researchers. Professional growth and learning possibilities. To be a key contributor to Oxcitas AI-powered solutions and discovery platform.
